
Positron Telecom Announces Release of G-1000 Office PBX

***Unmatched performance for enterprise communications,
offering 150 simultaneous calls, 60 call recording and unified messaging***

MONTREAL, Quebec, February 24, 2011 – Positron Telecommunications System Inc., a global innovator of Telephony and VoIP networking equipment for the enterprise and SOHO market, announced today that it has released a new product, the G-1000 Office PBX, for the medium sized enterprise market with typically up to 300 extensions. It comes equipped with integrated IP-PBX, call recording, firewall and unified messaging capabilities.

"One major advantage is not having to pay more for call recording or to purchase a separate recording appliance," said Richard McGravie, President of Positron Telecom. "We created a unique device that is all encompassing for the PBX world. The G-1000 Office PBX provides all the feature support and services required by today's enterprises with no additional cost. Something our competitors don't address."

The G-1000 Office PBX comes equipped with dual 10/100/1000 Mbps Ethernet, dual USB ports, integrated Compact Flash interface for additional storage, real time clock with battery and a PCI slot for integration of V-Series adapters. Aside from its hardware flexibility, the G-1000 has several unique characteristics in the IP-PBX market, all for no additional cost:

- Makes over 150 simultaneous calls
- Call recording for over 50 simultaneous calls
- Integrated Firewall and integrated anti PBX hacking capabilities
- Automatic phone provisioning, audio conference bridge and call center queuing

"Positron Telecom has a wide range of PBX Systems for the 30 and under extensions market," said McGravie. "The G-1000 is our first appliance that reaches enterprises with over 150 extensions. When we looked at this market we saw that all the competitors struggled to offer a scalable call recording option with their product. We are pleased to support this high density offering, which is ideal for companies with up to 50 simultaneous calls."

About Positron Telecommunications

Positron Telecommunication Systems develops and markets sophisticated VoIP equipment for enterprise communication and collaboration through communication service providers. The company's solutions integrate VoIP and traditional telephony in stand-alone systems that combine ease of use with powerful functionality. Its VoIP devices connect analog devices (telephone, fax and modem) to an IP-Network and gateways connect PSTN users to an IP Network or analog PBX, as well as Key Systems to an IP-Network.
