

For Immediate Release

Positron and babyTEL Announce Interoperability

MONTREAL, February 22, 2010 – babyTEL Inc., a leading provider of Voice over Internet Protocol (VoIP) solutions and Positron Telecommunication Systems Inc., a leader in sophisticated VoIP equipment for enterprise communication, are pleased to announce that SIP Trunking and associated VoIP features will now be supported with Positron Telecom's SIP-enabled business phone systems.

The two companies recently completed interoperability testing and certified that Positron Telecom's IP PBX systems work seamlessly with babyTEL's carrier-grade VoIP service.

"Positron Telecom has worked closely with babyTEL to offer a strong solution," said Richard McGravie, President of Positron Telecom. "This integration ensures that nothing goes wrong with the SIP Trunk configuration during the crucial setup phase of a customer installation."

Positron Telecom has created a product portfolio which includes enterprise installations from one to 100 users. The products offer a rich feature set, affordable hardware and the ability to offer local survivability to help compliment the babyTEL network in case of Internet outages.

Focusing on the demands of resellers, Positron is distinguishing itself as a player in the PBX market. They provide free installation and configuration support, free software upgrades, no limitation on the user configuration such as the number of IVR menus, a multilingual user interface and an out of the box solution, which allows resellers to co-brand the user interface for clients.

babyTEL's Enterprise VoIP service offers numerous features and fixed price packages compared with traditional telephone services. babyTEL's services were developed to meet today's business requirements to support virtual presences, multiple locations, satellite offices, mobile work force and tele-workers.

"This announcement represents babyTEL's continued commitment to Enterprise VoIP," said Steve Dorsey, President and CEO of babyTEL. "We are very pleased to have the opportunity to work with an innovative company like Positron Telecom. Our combined unique solution offers valuable features and benefits, providing a total telephone solution to the business community."

About babyTEL Inc.

babyTEL is a leading provider of quality VoIP telephony services, which leverage subscribers' high-speed Internet connections. babyTEL, headquartered in Montreal, is a leading-edge developer of VoIP and Unified Communications solutions with many years experience providing carrier-class products and managed services globally to large enterprises and service providers.

About Positron Telecommunication Systems Inc.

Positron Telecommunication Systems creates, develops and markets sophisticated VoIP equipment for enterprise communication and collaboration through communication service providers. The company's products integrate VoIP and traditional telephony in stand-alone systems that combine ease of use with powerful functionality. Its VoIP devices connect analog devices (telephone, fax and modem) to an IP-Network and gateways, connect PSTN users to an IP Network or analog PBX, as well as Key Systems to an IP-Network.
