## ***Positron Completes Vyatta Integration Testing***

---

**MONTREAL, October 9, 2009** – Positron Telecommunication Systems Inc. – a manufacturer of sophisticated VoIP enabled PBX systems – announced today that it has successfully integrated and tested the Positron V-Series PCI PBX adapters with Vyatta's open networking and security software, providing an easy to use, integrated voice and data networking solution.

"Integrating with Vyatta was a natural step for Positron," said Richard McGravie, President of Positron Telecom. "Both companies' software foundation is on Open Source applications and the Vyatta software platform offers complementary routing and security solutions for the Positron PCI PBX systems to integrate. Now enterprises have a unique value proposition for their customers, offering enterprises a secure and scalable voice platform."

"The Positron PBX solution is quite innovative," said Dave Roberts, Vice President of Strategy and Marketing at Vyatta. "The design allows resellers and partners to quickly and easily add PBX functionality to a Vyatta router and security appliance, providing a single hardware system that performs voice and data processing functions. This is quite valuable as our customers seek to decrease the space and power of their communications deployments."

Many of today's telephony solutions were architected over five years ago and struggle to blend within the IP world. Positron Telecom breaks down that barrier. Traditional telephony PBX boards only provide the telephony interface, which have complicated drivers that can have operating system issues and require a complex installation process that is prone to failure. The Positron Telecom solution integrates the PBX, incorporates telephony and IP ports and installs as an Ethernet adapter, which makes its operating system independent, thus requiring no additional drivers.

### **About Vyatta**

Vyatta builds commercially supported, open-source networking solutions that provide an alternative to over-priced, inflexible products from proprietary vendors. Our customers are smarter, better looking, and drive much nicer cars than purchasers of big-name products. Vyatta customers know that Vyatta's Linux-based router, firewall and VPN software gives them a level of control unavailable from proprietary solutions. Vyatta customers are thought leaders who recognize the benefits of flexible deployment options--x86 hardware, blade servers, virtualization--of freedom to integrate applications of their choice, and of the economic and performance advantages of commodity hardware and components. ### **About Positron Telecommunication Systems Inc.**

Positron Telecommunications Systems Inc. creates, develops and markets sophisticated VoIP equipment for enterprise communication and collaboration through communication service providers. The company's products integrate VoIP and traditional telephony in stand-alone systems that combine ease of use with powerful functionality. Its VoIP devices connect analog devices (telephone, fax and modem) to an IP-Network and gateways, connect PSTN users to an IP Network or analog PBX, as well as Key Systems to an IP-Network.
